Can't play it. Says I have over an hour of play time. When I go to launch nothing happens no loading screen or anything. The game says it's running but yet it's not listed even in my applications. Wish I could write an actual review. Maybe it's my hardware? Either way, I'm guessing if you have a modern PC this game will not work.. Meh story, meh graphics, meh gameplay, meh music, meh puzzles.

If you really love Monkey Island and played those to death, or point and click adventure games with really loose logic, then consider this.

*Note: I'm reviewing from modern perspective, I did not play this game at original launch and have no nostalgia for it.. I gave up on this one. I was really looking forward to something similar to Monkey Island series, but have found the mechanics to be clunky and the puzzles not really intuitive. Maybe I'll give it another go down the road, as I want to like this game.. It was a good time pass....

Try it if it is cheap and you like point and click games :). I gave up on this one. I was really looking forward to something similar to Monkey Island series, but have found the mechanics to be clunky and the puzzles not really intuitive. Maybe I'll give it another go down the road, as I want to like this game.. About the game. As a big fan of the Monkey Island series I can't really say it belongs in the same group. Ghost Pirates has the exact same controls as Curse of Monkey Island, the same art style and it's about pirates. But it lacks a bit in the humour department. Some puzzles aren't really logical and after much trial and error I just looked up the answers. Most of the time the order of things was incorrect or some small thing just popped up in a place where I just looked before.

Encountered numerous problems starting the game, looking at the discussions I'm not the only one. Eventually I got it running by forcing it to use my onboard graphics. Using a video card just wouldn't work.

However problems left aside I did enjoy the game and would recommend it when it's on sale. Looking at my play time I've finished it in about 10 to 12 hours.. The first 20 minutes is a cinematic cutscene and then it puts you into a 2d click to move puzzle with no instructions at all.. i dont like it very glitchy working bad

great game - funny pirates ghosts and puzzles.. Previously I couldn't play the game, but with the Dec. 5 update the game starts up for me (Windows 10).

I will start off by saying that I enjoyed the game. I enjoyed playing the Monkey Island games and this game does scratch the itch a bit for playing a point-and-click adventure game in a pirate setting with comedy. No doubt the similarity is there because the designer originally worked on the visuals of Monkey Island. What I liked the most were the characters. Each one, Papa Doc, Blue Belly, and Jane Sterling, are strikingly different from each other yet mesh well together as a trio out to dismantle the villain's plans.

However, the game does have its faults but mainly due to bugs. Despite being able to play the game now, most of the cutscenes between acts have failed to play for me. Fortunately the game didn't crash out and was able to skip to the next act, but it is a hassle as information about the plot is mentioned during those times. Furthermore, from what I have seen, the transitions can be fairly abrupt in terms of continuity between scenes. Another issue is that the gameplay becomes buggier later in the game. For example, after moving a laundry basket from one location to another, hovering the mouse cursor over its former location would still allow an action on it. Clicking it again would then trigger the same action again. It's not game breaking but it is there.

Overall, I would recommend the game. It's a fairly good point-and-click adventure game and the bugs weren't serious enough for me to stop playing it. I hope that the developers will make a sequel one day after they finish making their spin-off of this game.. "Thumbs up". This game is not for everyone. I am one of those. I tried to play it but the intro itself is kinda dry. The graphics aren't that great. The random music doesn't help. Also, make sure to hit save before you quit the game or else all your progress will be gone.. Tried all the workarounds to get it working and still does not work. Too many other options that DO work so just going to leave it uninstalled. Too bad because it seemed like it would have been fun.. Good adventure game. Nice graphic and sound.

The story is interesting and fun too.. There is a decent point and click game in here. However, the slowness and long winded dialog which is NOT skippable really pushes this into the "not recommended" category.

There are lots of problems with this game getting it to run properly. Fortunately, I had no issues with Windows 8.1. The only odd thing was that it would only launch on my secondary monitor in my dual monitor setup. Only disabling the secondary monitor fixed this.

This needs to be mentioned again. You CANNOT skip any dialog. It's by far my biggest issue with the game. You will do a lot of examining, touching and other actions to progress through the game. A majority of the time you'll have to try multiple things as the puzzles are not obvious. Each time something isn't right, the character will say an entire line telling you it doesn't work. Rinse and repeat many times and you can see how this would become annoying.

Another part where you'll wait are screen transitions. Each time you change screens it will fade to black for sometimes up to 7+ seconds. I'm not sure what it's loading or why the wait is that long.

With that aside, the gameplay is ok. You play as 1 of the 3 characters at a time. Making your way through their own separate environment. You can illicit help from the 2 other characters as they can "see" through your eyes and even control your body. A neat concept.

Unfortunately, I had to use a guide a small handful of times as either the puzzle would be illogical or I missed a small piece of the background that was interactive.

The graphics and voice overs are pretty good. The story abruptly ends and you're left hanging with a lot of the side stories.

Pros

- +60fps
- +Nice graphics / art
- +Some good voice actors
- +Story is ok

Cons

- +Cannot skip any dialog

-
- +Only launched on secondary monitor
 - +Illogical puzzles
 - +Long winded characters
 - +Abrupt ending with open side plot lines
 - +Lengthy black screen transitions

Especially for \$10, I can't recommend this game. The sheer amount of waiting will test your patience.

4/10 Below average. The first 20 minutes is a cinematic cutscene and then it puts you into a 2d click to move puzzle with no instructions at all.. Good graphics and characters. Very good voices too. Game works well and story is interesting and fun. Humour is funny and puzzles are not too hard.
